

RUNTRACK · UX Refresh

Redesigned onboarding, dashboard and live-run flows. Dark + orange kept exactly as-is. The work targets the two things you flagged — **consistency across screens** and **stronger data visualization**.

CONSISTENCY

- One control bar (lock · play/pause · stop) shared by every run state
- GPS status always a pill in the same spot — color changes, layout never shifts
- A single metric grid + type scale reused across all screens

DATA VIZ

- Weekly distance bar chart + goal ring on the dashboard
- Live pace-trend sparkline layered on the run map
- Route maps with start/finish markers and a live position pulse

PALETTE

- Accent #FF6A1A
- Base #0B0B0C
- GPS OK
- GPS Weak

Onboarding & Auth

UNIFIED SIGN-IN

- Segmented **Sign up / Log in** toggle — one screen, no dead-ends
- Continue with Apple** first — native, one-tap iOS path
- Live **password-strength** feedback & 54px tap targets

01 · TOUR — PROGRESS

Home / Dashboard

DATA-FORWARD

- Weekly bar chart** + goal ring replace the flat number list
- One dominant **START RUN** action; calmer hierarchy
- Tappable **Last Run** card with a route preview

03 · DASHBOARD

Live Run ONE LAYOUT · 4 STATES

- **Identical layout** across Active / Paused / Weak GPS — only state changes
- GPS pill stays put (**green→amber**); a live **pace trend** sits on the map
- Weak GPS = inline banner, no jump; Stop = bottom sheet with a recap

04 · ACTIVE

05 · PAUSED

06 · WEAK GPS

07 · CONFIRM STOP

Post-Run & Library

SAME SYSTEM

- Pace-by-km splits as ranked bars; fastest km highlighted
- History gains a year-to-date trend strip above the list
- Same metric grid, cards, type scale & tab bar throughout
